ASX Announcement

Additional Information to ASX announcement titled “Massive Nickel Sulphide Discovery at Berehaven Nickel Project”

Further to its ASX announcement earlier today, Metal Hawk Limited (ASX: MHK) (**Metal Hawk**) provides the following additional information relating to its massive nickel sulphide discovery:

1. The nature of the sulphide minerals

The nature of the minerals are fine grained sulphides which are a supergene weathering product of primary nickel sulphides.

2. Minerals observed

The minerals observed are fine grained massive sulphides likely to be violarite - pyrite which is a weathering product of primary pentlandite-pyrrhotite (+/- chalcopyrite).

3. Estimates of abundance of minerals observed

The estimated abundance of minerals observed is as follows:

- 144m to 145m – 80% sulphides (45% violarite 35% pyrite)
- 145m to 146m – 30% sulphides (18% violarite 12% pyrite)
- 146m to 147m – 1% to 2% sulphides (pyrite)
- 147m to 148m – 5% to 10% sulphides (2.5% to 5% violarite, 2.5% to 5% pyrite)

As per Metal Hawk’s previous announcement, all reverse circulation drillholes have been sampled and assays will be reported to the market as soon as possible.
